4.15	Group takeResources	35
4.15.1	Applicability of Group takeResources	35
5	Expected Reward	35
5.1	Actor's Reward	35
5.2	Group's Reward	36

1 Background

We use influence diagrams as the underlying graph structure for our ground truth. Here is a simple influence diagram for a simulation of two actors, showing the three types of nodes and some possible links (always directed) among them:

Figure 1: Simple influence diagram

- Rectangular nodes are possible actions for a particular agent (“Actor 1”, indicated by color) representing a potential behavior. They are labeled with a verb (“action”) and an optional object of the verb (“Actor2”). An action node has a binary value, indicating whether or not the action was chosen.
- Oval nodes are state variables. Their value is potentially a probability distribution over a domain of possible values. All true state variables will be certain (i.e., 100% probability for a single value), but agents’ perceptions of the true state will often be uncertain.
- Hexagonal nodes are utility or reward nodes. They represent an expected value computation by the agent (“Actor1”). The node’s value is a table with each row corresponding to a possible action choice and its expected utility.
- Links from action nodes to state nodes specify an effect that the action has on the value of the state. In the following specifications of these effects, a variable name followed by a ‘ will denote the value of the variable after the action is performed.
- Links from one state node to another specify an influence that the value of the first state node has on the effect of at least one action on the second state node.
- Links from a state node to an agent’s utility node specify that the state node is an input to the expected value calculation performed by that agent. There is a real-valued weight from $(0,1]$ on each link specifying the priority of that variable’s influence on that agent’s reward calculation (higher values mean higher priority).
- Links from utility nodes to action nodes indicate that the expected value calculation then determines whether or not that action is chosen. In the simulations described here, we use a strict maximization, so that the action choice is deterministic (i.e., the action with the highest expected value is performed, with ties broken by a pre-determined fixed order).
- Therefore, in the above simple ground truth, whether or not “Actor1” chooses to do “action” to “Actor2” influences the subsequent value of the variable “state” (link from rectangle to oval). The subsequent value of “state” also depends on its prior value (link from oval to itself). “Actor1”’s expected value of doing “action” to “Actor2” is a function of the value of “state” (link from oval to hexagon), and this expected value influences whether or not “Actor1” chooses to do so (link from hexagon to rectangle).

Any real values (e.g., initial values of variables, conditional probability table values, reward weights) will be drawn from either a set $\{0, 0.5, 1\}$ or $\{0, 0.2, 0.4, 0.6, 0.8, 1\}$, depending on the appropriate granularity needed.

2 State

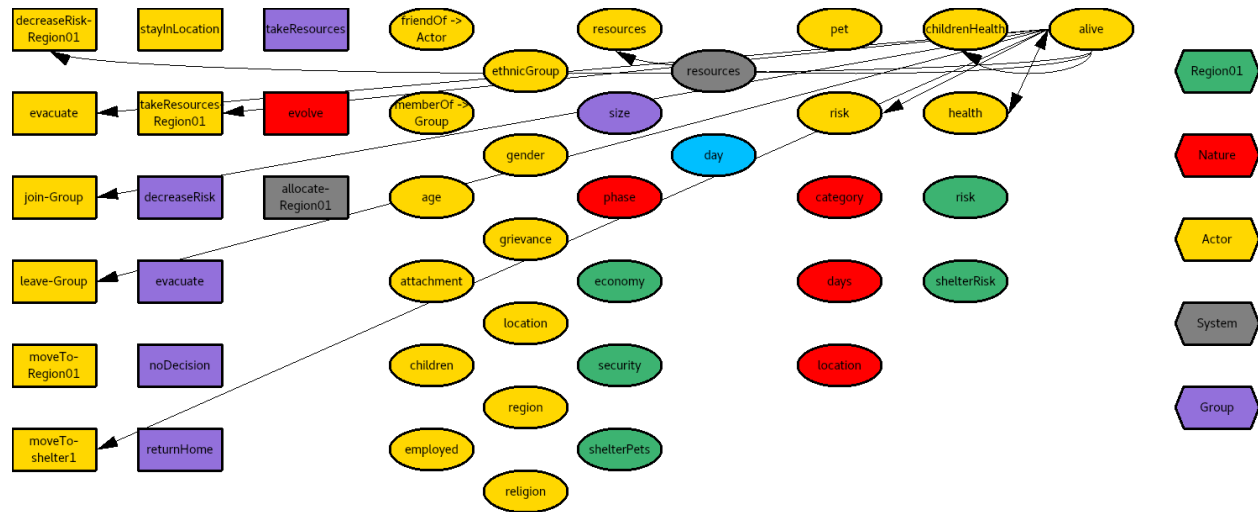

2.1 Actor’s age

Type: Integer

psychsim/domains/groundtruth/actor.py:66

2.2 Actor's alive

Type: Boolean

psychsim/domains/groundtruth/actor.py:191

2.2.1 Default change in Actor's alive

psychsim/domains/groundtruth/actor.py:466

IF Actor's alive

THEN : IF Actor's health' > 0.01

THEN : Actor's alive' ← true

ELSE : Actor's alive' ← false

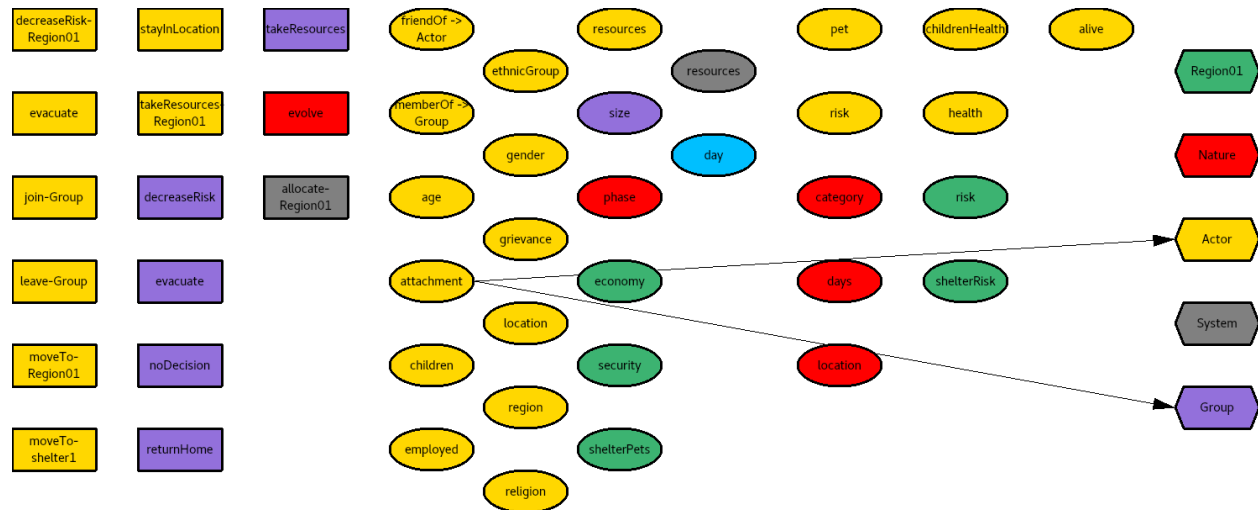

ELSE : Actor's alive' ← Actor's alive

2.3 Actor's attachment

Attachment style

Type: String

Values: anxious, avoidant, secure

psychsim/domains/groundtruth/actor.py:101

2.4 Actor's category

Type: Integer

psychsim/domains/groundtruth/actor.py:650

2.4.1 Observation function of Actor's category when Nature-evolve

IF Nature's category $\in \{0,5\}$

THEN : Actor's category' \leftarrow Nature's category

ELSE :

80%: Actor's category' \leftarrow Nature's category

19%: Actor's category' \leftarrow Nature's category - 1

2.4.2 Default observation of Actor's category

Actor's category' \leftarrow 0

2.5 Actor's center

Type: String

Values: Region01, none

psychsim/domains/groundtruth/actor.py:645

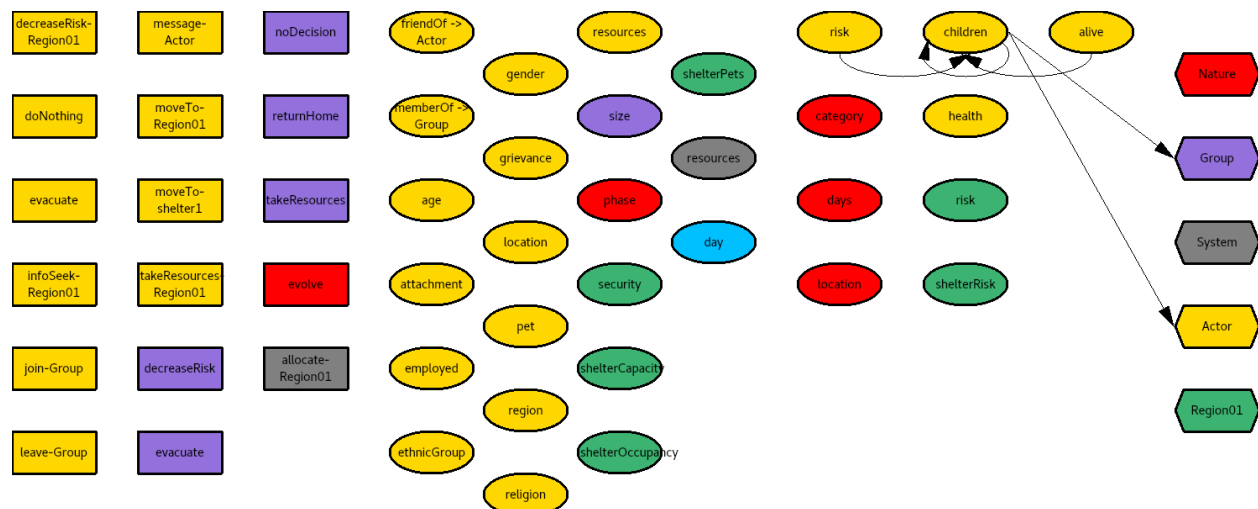

2.5.1 Default observation of Actor's center

Actor's center' \leftarrow Nature's location

2.6 Actor's children

Number of children

Type: Real

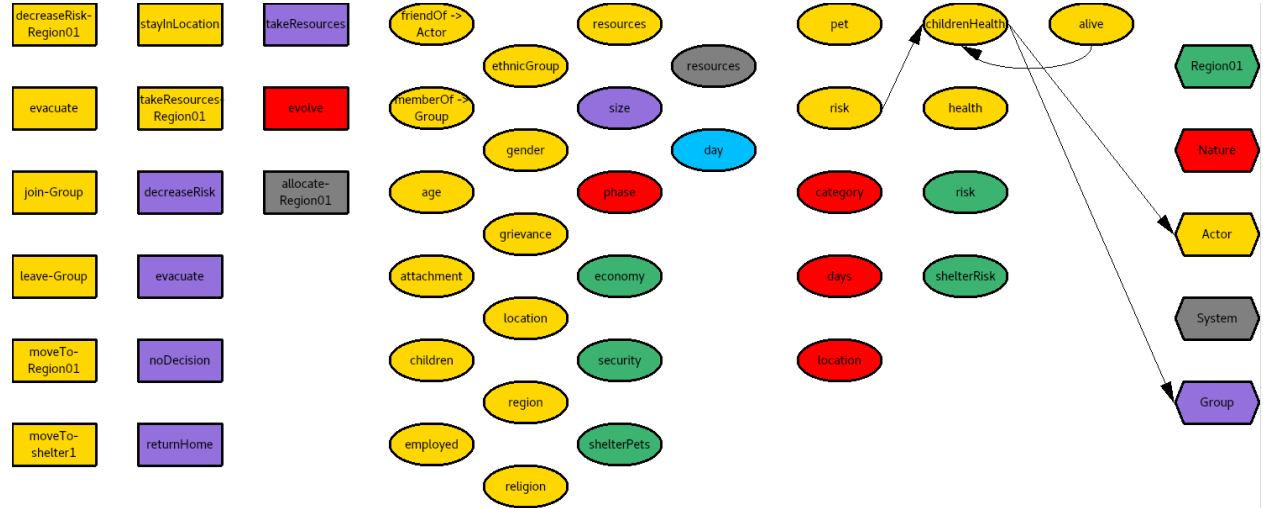

psychsim/domains/groundtruth/actor.py:75

2.7 Actor's childrenHealth

Current level of children's physical wellbeing

Type: Real

psychsim/domains/groundtruth/actor.py:213

2.7.1 Default change in Actor's childrenHealth

psychsim/domains/groundtruth/actor.py:457

IF Actor's alive

THEN : IF Actor's risk' ∈

[0,0.2]: Actor's childrenHealth' ← 60%·Actor's childrenHealth+0.24

(0.2,0.4]:

20%: Actor's childrenHealth' ← 60%·Actor's childrenHealth

80%: Actor's childrenHealth' ← 60%·Actor's childrenHealth+0.24

(0.4,0.6]:

40%: Actor's childrenHealth' ← 60%·Actor's childrenHealth

60%: Actor's childrenHealth' ← 60%·Actor's childrenHealth+0.24

60%: Actor's childrenHealth' ← 60%·Actor's childrenHealth

40%: Actor's childrenHealth' ← 60%·Actor's childrenHealth+0.24

(0.8,1.0]:

80%: Actor's childrenHealth' ← 60%·Actor's childrenHealth

19%: Actor's childrenHealth' ← 60%·Actor's childrenHealth+0.24

(1.0,1]:

100%: Actor's childrenHealth' ← 60%·Actor's childrenHealth

0%: Actor's childrenHealth' ← 60%·Actor's childrenHealth+0.24

ELSE : Actor's childrenHealth' ← 0.00

2.8 Actor's days

Type: Integer

psychsim/domains/groundtruth/actor.py:640

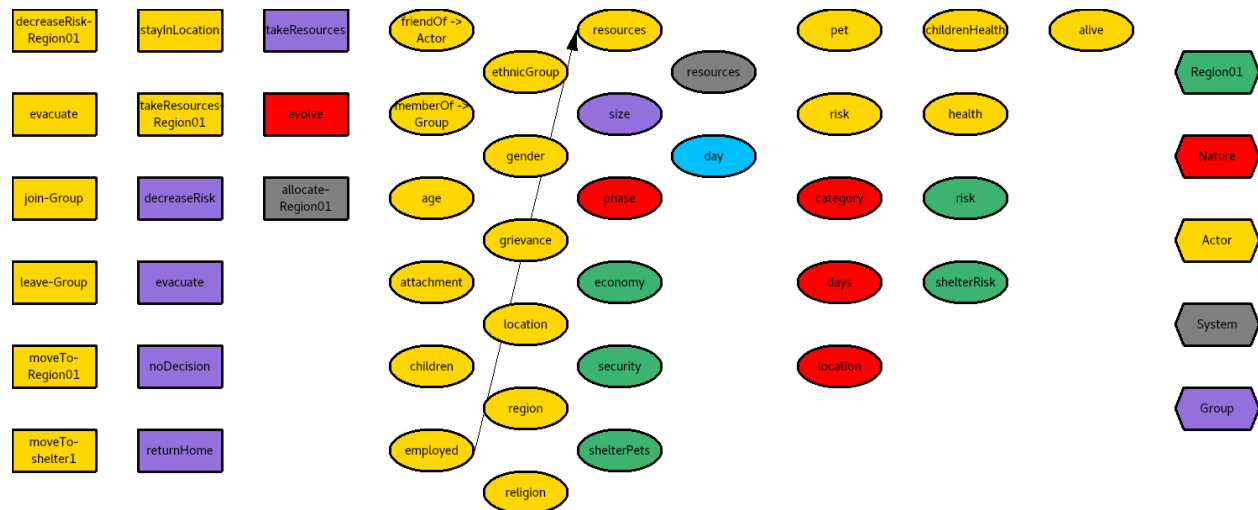

2.8.1 Default observation of Actor's days

Actor's days' ← Nature's days

2.9 Actor's employed

Has a full-time job

Type: Boolean

psychsim/domains/groundtruth/actor.py:83

2.10 Actor's ethnicGroup

Ethnicity of actor

Type: String

Values: majority, minority

psychsim/domains/groundtruth/actor.py:39

2.11 Actor's gender

Type: String

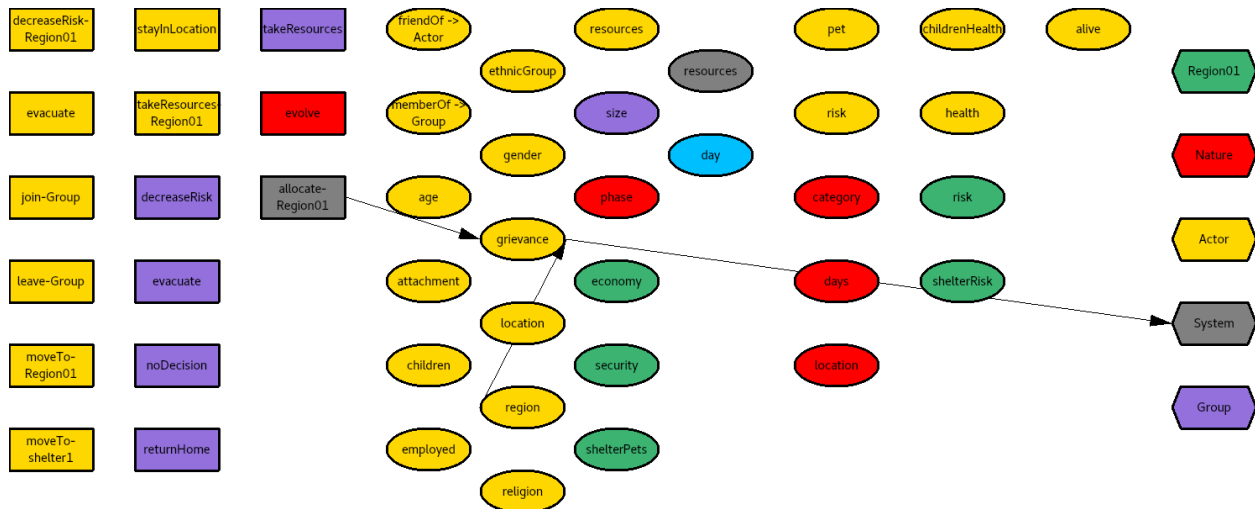

Values: female, male

psychsim/domains/groundtruth/actor.py:58

2.12 Actor's grievance

Current level of grievance felt toward system

Type: Real

psychsim/domains/groundtruth/actor.py:249

2.12.1 Effect of System-allocate-Region01 on Actor's grievance

psychsim/domains/groundtruth/system.py:53

IF Actor's region=Region01

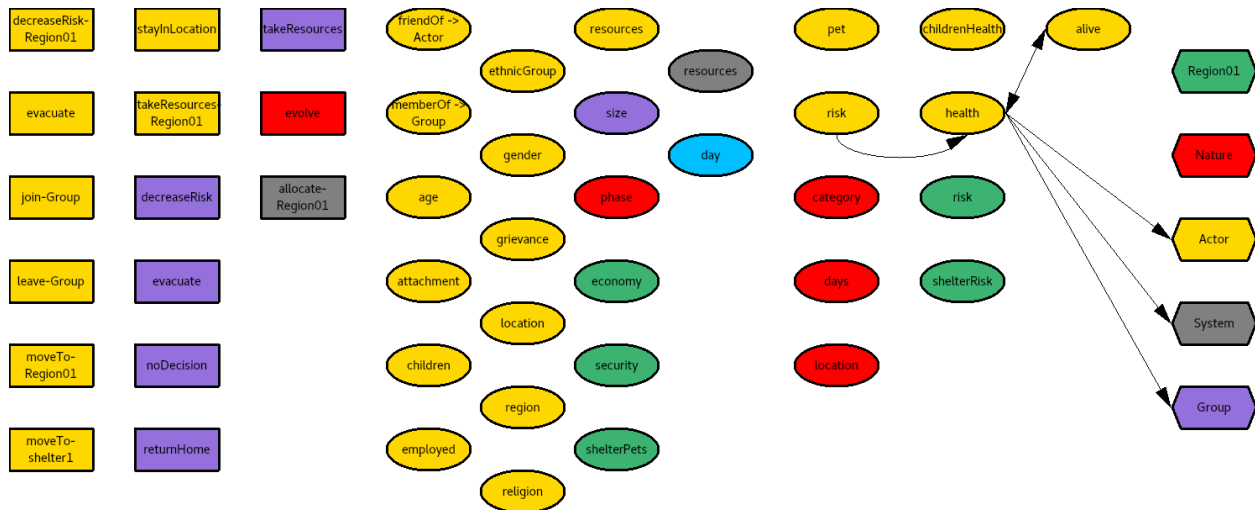

THEN : Actor's grievance' $\leftarrow 80\% \cdot \text{Actor's grievance}$

ELSE : Actor's grievance' $\leftarrow 80\% \cdot \text{Actor's grievance} + 0.20$

2.13 Actor's health

Current level of physical wellbeing

Type: Real

psychsim/domains/groundtruth/actor.py:195

2.13.1 Default change in Actor's health

psychsim/domains/groundtruth/actor.py:444

IF Actor's alive

THEN : IF Actor's risk' \in

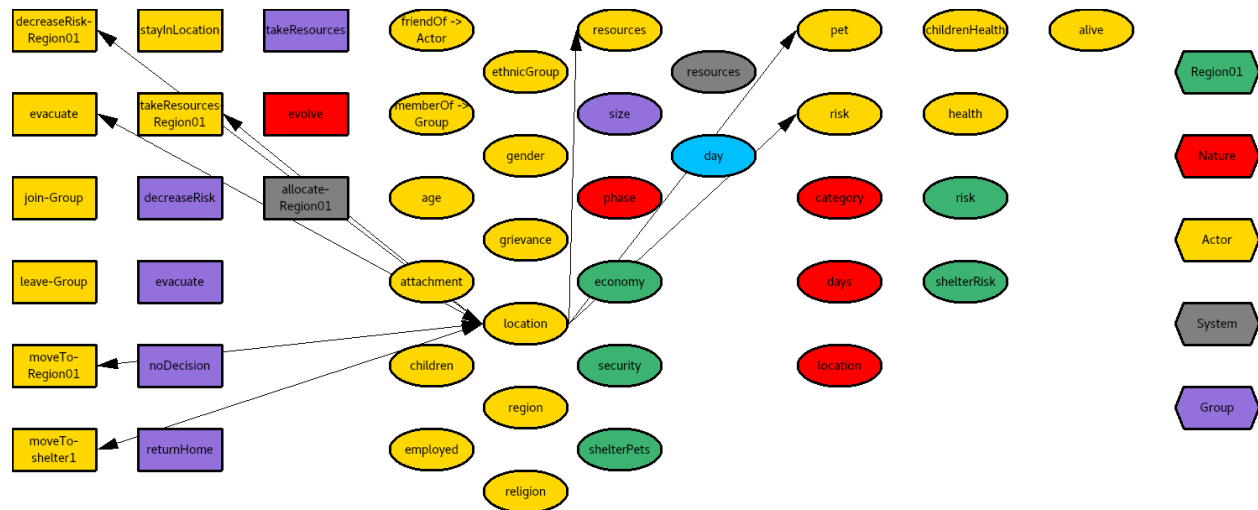

$[0,0.2]: \text{Actor's health}' \leftarrow 60\% \cdot \text{Actor's health} + 0.24$

 $(1.0,1]:$
 100%: $\text{Actor's health}' \leftarrow 60\% \cdot \text{Actor's health}$
 0%: $\text{Actor's health}' \leftarrow 60\% \cdot \text{Actor's health} + 0.24$
 ELSE : $\text{Actor's health}' \leftarrow 0.00$

2.14 Actor's location

Current location

Type: String

Values: Region01, evacuated, shelter1

psychsim/domains/groundtruth/actor.py:188

2.14.1 Effect of Actor-evacuate on Actor's location

psychsim/domains/groundtruth/actor.py:401

$\text{Actor's location}' \leftarrow \text{evacuated}$

2.14.2 Effect of Actor-moveTo-Region01 on Actor's location

psychsim/domains/groundtruth/actor.py:408

$\text{Actor's location}' \leftarrow \text{Region01}$

2.14.3 Effect of Actor-moveTo-shelter1 on Actor's location

psychsim/domains/groundtruth/actor.py:398

Actor's location' ← shelter1

2.15 Actor's perceivedChildrenHealth

Type: Real

psychsim/domains/groundtruth/actor.py:681

2.15.1 Default observation of Actor's perceivedChildrenHealth

Actor's perceivedChildrenHealth' ← Actor's childrenHealth

2.16 Actor's perceivedHealth

Type: Real

psychsim/domains/groundtruth/actor.py:676

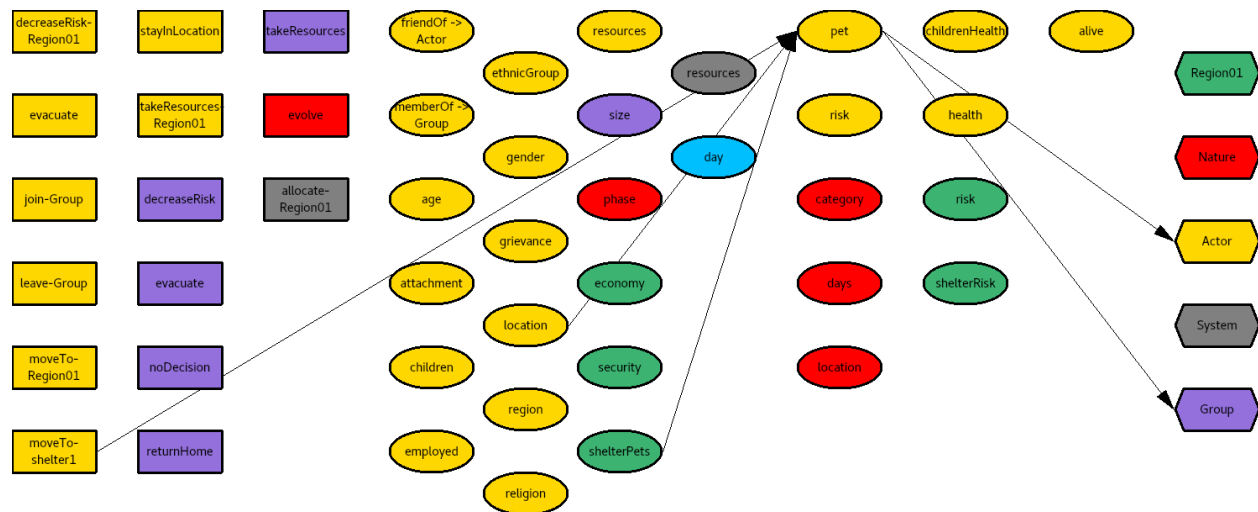

2.16.1 Default observation of Actor's perceivedHealth

Actor's perceivedHealth' ← Actor's health

2.17 Actor's pet

Owns a pet

Type: Boolean

psychsim/domains/groundtruth/actor.py:88

2.17.1 Effect of Actor-moveTo-shelter1 on Actor's pet

psychsim/domains/groundtruth/actor.py:579

IF Actor's location' = shelter1

THEN : IF Region01's shelterPets

THEN : Actor's pet' ← Actor's pet

ELSE : Actor's pet' ← false

ELSE : Actor's pet' ← Actor's pet

2.18 Actor's phase

Type: String

Values: active, approaching, none

psychsim/domains/groundtruth/actor.py:636

2.18.1 Default observation of Actor's phase

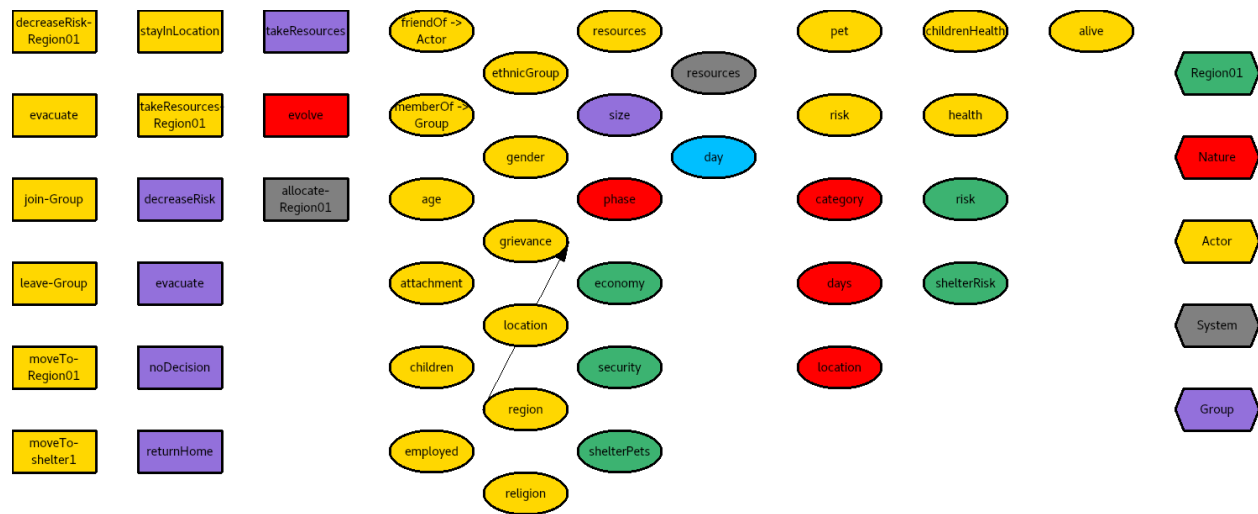

Actor's phase' \leftarrow Nature's phase

2.19 Actor's region

Region of residence

Type: String

Values: Region01

psychsim/domains/groundtruth/actor.py:150

2.20 Actor's religion

Religious affiliation of actor

Type: String

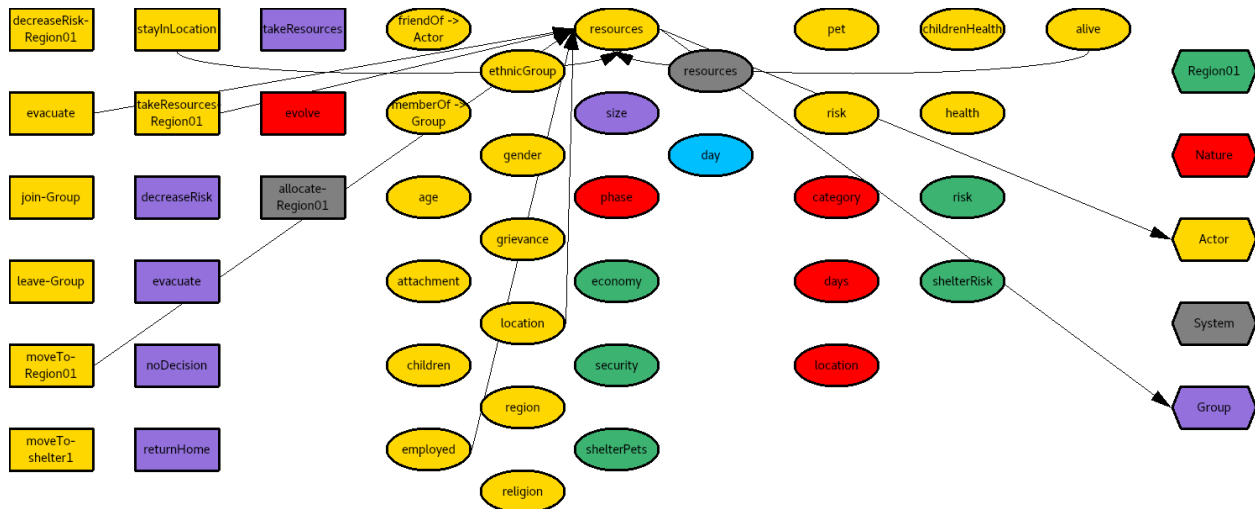

Values: majority, minority, none

psychsim/domains/groundtruth/actor.py:47

2.21 Actor's resources

Material resources (wealth) currently owned

Type: Real

psychsim/domains/groundtruth/actor.py:217

2.21.1 Effect of Actor-evacuate on Actor's resources

psychsim/domains/groundtruth/actor.py:503

IF Actor's resources > 0.20

THEN : Actor's resources' \leftarrow Actor's resources - 0.20

ELSE : Actor's resources' \leftarrow 0.00

```

The diagram illustrates a semantic network for disaster response. It consists of several interconnected nodes and relationships:

- Left Column (Nodes):**
 - decreaseRisk-Region01
 - stayInLocation
 - takeResources
 - evacuate
 - takeResources-Region01
 - evolve
 - join-Group
 - decreaseRisk
 - allocate-Region01
 - leave-Group
 - evacuate
 - moveTo-Region01
 - noDecision
 - moveTo-shelter1
 - returnHome
- Central Hub (Nodes):**
 - friendOf -> Actor
 - memberOf -> Group
 - ethnicGroup
 - resources
 - resources
 - size
 - day
 - gender
 - phase
 - grievance
 - economy
 - location
 - children
 - security
 - region
 - employed
 - shelterPets
 - religion
- Right Column (Nodes):**
 - pet
 - childrenHealth
 - alive
 - risk
 - health
 - category
 - risk
 - days
 - shelterRisk
 - location
- Far Right Column (Nodes):**
 - Region01
 - Nature
 - Actor
 - System
 - Group

Relationships are indicated by lines connecting nodes across the grid, showing the flow of information and actions in the disaster response scenario.
